Review

On the cover: the 2 times table drawn on a circle of 300 points. Each lesson has its own times-table circle.

Every lesson is **one double-sided sheet**. Each new exercise starts with a dark number block and its own times-table circle. **Page 1: learn it. Page 2: practise it.**

EXAMPLE

Shaded. Your teacher works it out with you. **Copy their working** onto the lines.

**YOUR TURN**

White, with a strong border. **Now you try** one just like it, on your own.

- Do now** Start straight away, from memory.
- Think first** Have a go before the lesson. An example gives the answer.
- Words and Big idea** Fill in the Big idea with your teacher.
- Explain** Tick the better reason. Be ready to say why.
- Check** Everyone answers, so your teacher knows who is ready.
- Spot the pattern** One thing changes each time. Watch the answers.
- Mixed practice** Mostly today's skill. Check with the mixed-up answers.
- Go further** Finished? Questions that make you think harder.
- Exit ticket** Three questions on your own. Then your marked score.

In this chapter you will

- understand positive and negative numbers and their opposites
- use a number line to show and compare integers
- order integers
- add, subtract, multiply and divide integers
- use the order of operations with integers, with and without a calculator
- solve problems involving integers

**About the circles**

Put 10 points around a circle, numbered 0 to 9. Join each point to the point **twice** its number. After 9, count on from 0 again: so 6 joins to 12, which is point 2. Use 300 points and the lines draw the heart shape on the cover. Lesson 1 uses the 2 times table, lesson 2 the 3 times table, and so on. Count the points of each shape: always one less than the times table.

Acknowledgement of Country

We acknowledge the Bundjalung people, the Traditional Custodians of the land on which Kingscliff High School stands, and pay our respects to Elders past and present.

Integers and opposites

Today I will use integers and find opposites.

WORDS

integer: a whole number: ...

 $-2, -1, 0, 1, 2, \dots$

opposite: same distance from 0, other side.

 $-(-5)$: say "the opposite of negative five".**BIG IDEA** Fill in the gaps with your teacher.

Negative numbers are to the _____ of 0 on a number line. A number and its _____ are the same _____ from 0, but on the other side.

**LEARN IT** Copy your teacher's working for each example, then try your turn. Explain: tick the better reason.**EXAMPLE 1**

Write an integer for 5 m below sea level.

→

YOUR TURN 1

Write an integer for a loss of \$8.

a loss: _____

= _____

EXPLAIN Why is 5 m below sea level a negative number?☐ A Sea level is 0, and below 0 is negative.☐ B Going down means taking away.**EXAMPLE 2**The opposite of -6 

→

YOUR TURN 2

The opposite of 9

___ is ___ steps right of ___

EXPLAIN How does the number line show that 6 is the opposite of -6 ?☐ A 6 is bigger than -6 .☐ B Both are 6 steps from 0, on different sides.**EXAMPLE 3** $-(-7)$

→

YOUR TURN 3 $-(-11)$ **EXPLAIN** Why is $-(-7)$ equal to 7?☐ A Two negatives always make a positive.☐ B It means the opposite of -7 , and that is 7.**CHECK** Everyone answers. Circle one letter, then hold it up.What is the opposite of -8 ?(A) -8

EXPLAIN Not every mark has a number. How can you find the number at the dot?☐ A Each gap is 1, so count gaps from a label.☐ B Count the marks from the left end.**EXAMPLE 2**

How far is it from -3 to 5?

→

YOUR TURN 2

How far is it from -4 to 5?

____ to ____, ____ from ____

EXPLAIN Why do we add the 3 and the 5?☐ A We always add the two numbers we are given.☐ B It is 3 steps to 0, then 5 more from 0.**EXAMPLE 3**

Which integer is halfway between -8 and 2?

→

YOUR TURN 3

Which integer is halfway between -6 and 4?

EXPLAIN How can you check that -3 is halfway between -8 and 2?☐ A -3 is 5 steps from -8 and 5 steps from 2.☐ B -3 is between -8 and 2.**CHECK** Everyone answers. Circle one letter, then hold it up.
