How to use this booklet

- Each lesson is **one double-sided sheet**. Write your name, class and date at the top.
- Then work down the **columns**, left to right. They get harder as you go: **Easy** **Easy** **Medium** on page 1, then **Medium** **Challenging** **Challenging** on page 2.
- Most questions practise **today's skill**. A question marked **from 1.03** comes from an earlier lesson, to keep it fresh. Stuck? Look back at that lesson.
- Each question tells you what to do: read it carefully. Show your working on the lines. The first question with working in each Easy column shows you how to set it out.

WE DO

About the artwork

The pictures in this booklet are parts of the **Mandelbrot set**, drawn by a computer that repeats one simple rule, $z \rightarrow z^2 + c$, thousands of times for every point. Every booklet shows a different part of the set: this one is the thin branches (dendrites) that grow from the very top of the set. Maths can make beautiful things.

KEY IDEA

Capacity is how much a container holds. 1 L = 1000 mL. A space of 1 cm^3 holds 1 mL, so 1000 cm^3 holds 1 L, and 1 m^3 holds 1000 L.

Watch your teacher.
Copy every step.

E1 Change 2.75 L to millilitres.

E2 A box is 20 cm by 10 cm by 15 cm. How many litres does it hold?

E3 A 2 000 L tank fills at 25 L a minute. How long does it take to fill?
