How to use this booklet

1 Each lesson is **one hour**. Start with the **learning intentions** and **success criteria**, write the **key terms** and use the **notes** box.

WE DO

Grey boxes. Your teacher works each example (parts a, b, c) on the board. **Copy every step** into the space.

2 Every lesson has three levels: **Easy**, then **Medium**, then **Challenging**. Work down the page: the questions get harder as you go.

YOU DO

Blue boxes. Now it is your turn. Work on your own. Quick drill answers go on the line; show working in the boxes.

DRILL

Skill drill pages. After the Easy and the Medium examples there is a full page of short practice questions. Work down the page, write answers on the lines, then mark it and record your score and time.

3 Finished early? Try the **extension**. At the end, **show off your skill** on the tear-off exit ticket and hand it in.

4 Missed a lesson? Each lesson ends with a **summary** with a worked example for every level. Start there.

In this chapter you will

- convert units of length, mass, capacity and time
- find perimeter and circumference
- convert area units and find the area of rectangles, triangles, parallelograms and composite shapes
- draw cross-sections and views of prisms
- convert volume units and find the volume of prisms
- find capacity in litres

About the artwork

The pictures in this booklet are parts of the **Mandelbrot set**, drawn by a computer that repeats one simple rule, $z \rightarrow z^2 + c$, thousands of times for every point. Every booklet shows a different part of the set: this one is the thin branches (dendrites) that grow from the very top of the set. Maths can make beautiful things.

Learning intentions

We are learning to:

- convert between units of length, mass, capacity and time

Success criteria

I can:

- ☐ know the metric prefixes: kilo, centi, milli
- ☐ multiply to convert to a smaller unit, divide to convert to a larger unit
- ☐ convert units of time

Key terms Write the definition as your teacher explains it.

Level 1 · Getting started

Easy · 28 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Convert. Bigger unit to smaller: multiply.

a Convert 3200 m to km.

b Convert 0.042 kg to g.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **28 QUESTIONS**

REMEMBER $\text{km} \rightarrow \text{m} \times 1000$, $\text{m} \rightarrow \text{cm} \times 100$, $\text{cm} \rightarrow \text{mm} \times 10$.

ROUND 1 Questions 1–12: convert. Big unit to small unit: multiply. Small to big: divide.

1 0.22 m to cm

2 0.5 cm to mm

3 36 000 mm to m

4 0.28 kL to L

5 48 m to mm

6 130 mL to L

7 23 m to mm

8 150 mm to m

Worked example

A path 1 m wide runs along two sides of a 12 m by 8 m lawn (an L-shape). Find the area of the path.

1. Outer rectangle $13 \times 9 = 117 \text{ m}^2$
2. Lawn $12 \times 8 = 96 \text{ m}^2$
3. $117 - 96$

Answer: 21 m^2

YOU DO
