

Chapter 3: Whole numbers

12 lessons · one lesson for each exercise · each lesson is one hour

NSW syllabus outcome

Stage 4 Number and algebra: MA4-CAL-C-01 compares, orders and calculates with integers, and MA4-IND-C-01 (index notation, primes, factors and multiples).

CHAPTER

3

3.01 Rounding and estimation

3.02 Multiplication

3.03 Division

3.04 Divisibility tests

3.05 Long division

3.06 Roman numerals

3.07 Index notation and powers

3.08 Square roots and cube roots

3.09 Prime and composite numbers

3.10 Prime factors

3.11 Highest common factor

3.12 Lowest common multiple

How to use this booklet

1 Each lesson is **one hour**. Start with the **learning intentions** and **success criteria**, write the **key terms** and use the **notes box**.

2 Every lesson has three levels: **Easy**, then **Medium**, then **Challenging**. Work down the page: the questions get harder as you go.

WE DO **Grey boxes.** Your teacher works each example (parts a, b, c) on the board. **Copy every step** into the space.

YOU DO **Blue boxes.** Now it is your turn. Work on your own. Quick drill answers go on the line; show working in the boxes.

DRILL **Skill drill pages.** After the Easy and the Medium examples there is a full page of short practice questions. Work down the page, write answers on the lines, then mark it and record your score and time.

3 Finished early? Try the **extension**. At the end, **show off your skill** on the tear-off exit ticket and hand it in.

4 Missed a lesson? Each lesson ends with a **summary** with a worked example for every level. Start there.

Contents and progress tracker

Lesson	Topic	Page	Date	Done
3.01	Rounding and estimation	3		☐
3.02	Multiplication	7		☐
3.03	Division	11		☐
3.04	Divisibility tests	15		☐
3.05	Long division	19		☐
3.06	Roman numerals	23		☐
3.07	Index notation and powers	27		☐
3.08	Square roots and cube roots	31		☐
3.09	Prime and composite numbers	35		☐
3.10	Prime factors	39		☐
3.11	Highest common factor	45		☐
3.12	Lowest common multiple	49		☐

In this chapter you will

- round and estimate
- multiply and divide whole numbers
- use divisibility tests
- use long division and Roman numerals
- use index notation, square roots and cube roots
- find prime numbers and prime factors
- find the HCF and LCM of two numbers

About the artwork

The pictures in this booklet are parts of the **Mandelbrot set**, drawn by a computer that repeats one simple rule, $z \rightarrow z^2 + c$, thousands of times for every point. Every booklet shows a different part of the set: this one is the tentacled edge of a small copy of the whole set, out on the antenna near -1.77 . Maths can make beautiful things.

Acknowledgement of Country

We acknowledge the Bundjalung people, the Traditional Custodians of the land on which Kingscliff High School stands, and pay our respects to Elders past and present.

LESSON
3.01

Rounding and estimation

Date _____

Learning intentions

We are learning to:

- round whole numbers
- estimate answers by rounding first

Success criteria

I can:

- ☐ find the **rounding digit** and look at the digit after it
- ☐ round to the nearest 10, 100, 1000 or 10 000
- ☐ estimate by rounding each number first

Key terms Write the definition as your teacher explains it.

Round

Estimate

Notes

Level 1 · Getting started

Easy · 28 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Round 87 531 to the place given.

a Round 87 531 to the nearest thousand.

b Round 87 531 to the nearest ten.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **28 QUESTIONS**

REMEMBER Find the rounding digit.

ROUND 1 Questions 1–12: round to the place given.

1 6 358 (nearest 100)

2 2 694 (nearest 100)

3 383 (nearest 10)

4 4 546 (nearest 100)

5 627 (nearest 10)

6 62 (nearest 10)

7 98 (nearest 10)

8 14 (nearest 10)

9 4 902 (nearest 100)

10 4 655 (nearest 100)

11 71 539 (nearest 1 000)

12 4 816 (nearest 100)

YOU DO

On your own: **Easy** keep going: Round 2.

16 QUESTIONS MORE

ROUND 2

Questions 13–28: estimate: round each number to the nearest 10 first.

13 $95 + 68$

14 $73 + 31$

15 $24 + 91$

16 $99 + 64$

17 $78 + 77$

18 $71 + 60$

19 $82 + 88$

20 $91 - 69$

21 $18 + 21$

22 $89 - 22$

23 $63 + 41$

24 $91 + 64$

25 $24 + 44$

26 $23 + 47$

27 $45 + 62$

28 $23 + 48$

Level 2 · Building up

Medium · 22 questions

WE DO

With your teacher: copy what they write on the board.

Example 2

Estimate by rounding each number first.

a Estimate $425 + 81 + 940 + 22$.

Your teacher works this out. Copy every step.

b Estimate $864 + 250 - 417$.

Your teacher works this out. Copy every step.

YOU DO

On your own: **Medium** practise the skill. Work down the page, one round at a time. Write each answer on its line.

22 QUESTIONS

REMEMBER Look at the digit to its right.

ROUND 1

Questions 1–16: round to the first (leading) digit.

1 566

2 35 003

3 2 806

4 367

5 94 001

6 77

7 9 201

8 47 001

9 79 002

10 446

11 574

12 57

13 70

14 91 002

15 20

16 60

YOU DO

On your own: **Medium** keep going: Round 2.

6 QUESTIONS MORE

ROUND 2

Questions 17–22: estimate: round each number to its leading digit first.

17 84×194

18 48×617

19 29×202

20 53×963

21 40×148

22 88×245

Level 3 • Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Estimate by rounding each number first.

a Estimate 93×19 .

b Estimate $2402 \div 32$.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO

On your own: **Challenging** Estimate, then check with a calculator.

3 QUESTIONS

REMEMBER 5 or more: round up. 4 or less: stay.

1 48×21

② 612×9

3 $3950 \div 38$

✂ Show off your skill: tear along this line and hand it to your teacher ✂

YOU DO

Show off your skill

Choose **ONE** question. Show your working.

Jane	Music

Round 6382 to the nearest hundred.

Estimate $512 + 289 - 97$.

Estimate $4180 \div 21$.

 Extension · Stretch yourself Worked example

A number rounded to the nearest hundred is 4700. What are the smallest and largest whole numbers it could be?

1. Numbers from 4650 round up to 4700
2. 4750 rounds up to 4800, so stop at 4749

Answer: 4650 and 4749

YOU DO

On your own: read the worked example, then try these.

- E1** A number rounded to the nearest thousand is 12 000. Find the smallest and largest whole numbers it could be.

- E2** A crowd was “about 35 000” to the nearest thousand. What is the largest the crowd could have been?

Lesson summary

Missed the lesson? Start here.

- Remember**
1. Find the rounding digit.
 2. Look at the digit to its right.
 3. 5 or more: round up. 4 or less: stay.
 4. Estimate: round first, then calculate.

 Level 1

Round 87 531 to the nearest thousand

1. Thousands digit 7, next digit 5
2. Round up

Answer: 88 000

 Level 2

Round 3499 to the nearest thousand

1. Next digit 4

Answer: 3000

 Level 3

Estimate 93×19

1. $\approx 90 \times 20$

Answer: 1800

 Extension

Nearest hundred is 4700

1. 4650 to 4749

Answer: 4650 and 4749

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.02

Multiplication

Date _____

Learning intentions

We are learning to:

- multiply whole numbers mentally and on paper

Success criteria

I can:

- ☐ use mental strategies such as doubling or splitting a number
- ☐ multiply by a one-digit number on paper
- ☐ multiply by a two-digit number on paper

Key terms Write the definition as your teacher explains it.

Product

Algorithm

Notes

Level 1 · Getting started

Easy · 32 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Evaluate mentally.

a 12×4

Your teacher works this out. Copy every step.

b 25×8 (use doubling)

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **32 QUESTIONS**

REMEMBER Double and halve: $25 \times 8 = 50 \times 4$.

ROUND 1 Questions 1–16: know your times tables.

1 7×6

2 8×10

3 4×4

4 9×11

5 10×8

6 4×2

7 4×5

8 3×5

9 5×6

10 9×9

11 10×11

12 10×9

13 2×9

14 6×4

15 8×8

16 9×8

YOU DO

On your own: **Easy** keep going: Round 2.

16 QUESTIONS MORE

ROUND 2

Questions 17–32: multiply by 10, 100 or 1000: move the digits.

17 667×100

18 707×100

19 $234 \times 1\,000$

20 517×10

21 445×100

22 874×10

23 370×100

24 924×100

25 60×10

26 471×10

27 225×10

28 $284 \times 1\,000$

29 $68 \times 1\,000$

30 540×10

31 $502 \times 1\,000$

32 437×100

Level 2 · Building up

Medium · 19 questions

WE DO

With your teacher: copy what they write on the board.

Example 2

Evaluate using the strategy given.

a 34×5 (use $\times 10 \div 2$)

Your teacher works this out. Copy every step.

b 33×9 (use $\times 10 - 1$)

Your teacher works this out. Copy every step.

YOU DO

On your own: **Medium** practise the skill. Work down the page, one round at a time. Write each answer on its line (show working in the boxes).

19 QUESTIONS

REMEMBER $\times 5$ is the same as $\times 10 \div 2$.

ROUND 1

Questions 1–16: evaluate mentally. Split the number: $34 \times 6 = 30 \times 6 + 4 \times 6$.

1 21×9

2 45×9

3 55×5

4 21×6

5 75×6

6 53×4

7 16×6

8 95×5

9 61×5

10 25×5

11 87×4

12 54×9

13 62×5

14 52×7

15 71×7

16 53×5

YOU DO On your own: **Medium** keep going: Round 2.

3 QUESTIONS MORE

ROUND 2 Questions 17–19: evaluate on paper.

17 865×6

18 941×8

19 689×9

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO With your teacher: copy what they write on the board.

Example 3 Evaluate on paper.

a 126×7

Your teacher works this out. Copy every step.

b 565×18

Your teacher works this out. Copy every step.

YOU DO On your own: **Challenging** Evaluate each product on paper.

3 QUESTIONS

REMEMBER $\times 9$ is the same as $\times 10$ – the number.

1 565×18

2 47×23

3 312×45

✕ Show off your skill: tear along this line and hand it to your teacher ✕

YOU DO **Show off your skill** Choose **ONE** question. Show your working.

Name _____ Class _____

Level 1

Evaluate 14×5 .

Level 2

Evaluate 243×6 .

Level 3

Evaluate 128×27 .

Extension · Stretch yourself**Worked example**Find the missing digits: $4\square \times 6 = 2\square 8$

- Units: $\square \times 6$ ends in 8, so $\square = 3$ or 8
- $43 \times 6 = 258$ ✓; $48 \times 6 = 288$ ✓

Answer: $43 \times 6 = 258$ or $48 \times 6 = 288$ **YOU DO**

On your own: read the worked example, then try these.

- E1**
- Find the missing digit:
- $\square 7 \times 5 = 185$
- .

- E2**
- Find two 2-digit numbers whose product is 1000.

Lesson summary

Missed the lesson? Start here.

Remember 1. Double and halve: $25 \times 8 = 50 \times 4$.
3. $\times 9$ is the same as $\times 10$ – the number.2. $\times 5$ is the same as $\times 10 \div 2$.
4. On paper: multiply each digit and carry.**Level 1**

12×4

- 1.
- $10 \times 4 + 2 \times 4$

Answer: 48**Level 2**

34×5

- 1.
- $340 \div 2$

Answer: 170**Level 3**

565×18

- $565 \times 8 = 4520$
- $565 \times 10 = 5650$
- Add

Answer: 10 170**Extension**

$4\square \times 6 = 2\square 8$

1. Try 3 and 8

Answer: 43 or 48

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.03

Division

Date _____

Learning intentions

We are learning to:

- divide whole numbers mentally and using short division

Success criteria

I can:

- ☐ divide by 10, 100 and 1000 mentally
- ☐ use short division with a one-digit divisor
- ☐ write a remainder when the division is not exact

Key terms Write the definition as your teacher explains it.

Quotient

Remainder

Notes

Level 1 · Getting started

Easy · 32 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Evaluate mentally.

a $2400 \div 10$

b $144 \div 9$

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **32 QUESTIONS**

REMEMBER $\div 10, 100, 1000$: move digits right.

ROUND 1 Questions 1–16: know your division facts.

1 $50 \div 10$

2 $77 \div 11$

3 $84 \div 7$

4 $10 \div 2$

5 $88 \div 11$

6 $42 \div 6$

7 $81 \div 9$

12 $136 \div 4$

13 $232 \div 8$

14 $196 \div 7$

15 $235 \div 5$

16 $228 \div 6$

YOU DO

On your own: **Medium** keep going: Round 2.

3 QUESTIONS MORE

ROUND 2

Questions 17–19: use short division. Write any remainder.

17 $388 \div 7$

18 $955 \div 8$

19 $852 \div 9$

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Use short division.

a $1296 \div 8$

Your teacher works this out. Copy every step.

b $847 \div 7$

Your teacher works this out. Copy every step.

YOU DO

On your own: **Challenging** Divide. Write any remainder.

3 QUESTIONS

REMEMBER A remainder is what is left over.

1 $475 \div 6$

2 $1003 \div 4$

3 $5000 \div 7$

✕ Show off your skill: tear along this line and hand it to your teacher ✕

YOU DO

Show off your skill

Choose **ONE** question. Show your working.

Name _____ Class _____

Level 1

Evaluate $360 \div 10$.

Level 2

Evaluate $738 \div 6$.

Level 3

Evaluate $1250 \div 8$, with remainder.

Extension · Stretch yourself**Worked example**

I am a number between 50 and 70. Divided by 4 I leave remainder 1; divided by 5 I leave remainder 3. What am I?

1. Remainder 1 $\div$ 4: 53, 57, 61, 65, 69
2. Remainder 3 $\div$ 5: 53, 58, 63, 68

Answer: 53**YOU DO**

On your own: read the worked example, then try these.

- E1** Find a number between 20 and 40 that leaves remainder 2 when divided by 3, 4 and 6.

- E2** $1000 \div 7$: what is the remainder?

Lesson summary

Missed the lesson? Start here.

- Remember**
1. $\div$ 10, 100, 1000: move digits right.
 3. A remainder is what is left over.

2. Short division: divide each digit, carry the remainder.
4. In a problem, decide whether to round up.

Level 1

$$2400 \div 10$$

1. Move digits 1 place right

Answer: 240**Level 2**

$$528 \div 4$$

1. $5 \div 4 = 1 \text{ r}1$
2. $12 \div 4 = 3$
3. $8 \div 4 = 2$

Answer: 132**Level 3**

$$475 \div 6$$

1. $47 \div 6 = 7 \text{ r}5$
2. $55 \div 6 = 9 \text{ r}1$

Answer: 79 r 1**Extension**

$$\div 4 \text{ r}1 \text{ and } \div 5 \text{ r}3$$

1. List and compare

Answer: 53

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.04

Divisibility tests

Date _____

Learning intentions

We are learning to:

- use divisibility tests for 2, 3, 4, 5, 6, 8, 9 and 10

Success criteria

I can:

- ☐ test for 2, 5 and 10 using the last digit
- ☐ test for 3 and 9 using the digit sum
- ☐ test for 4, 6 and 8

Key terms Write the definition as your teacher explains it.

Divisible

Digit sum

Notes

Level 1 · Getting started

Easy · 32 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Use the tests for 2, 5 and 10, then for 3 and 9.

a Is 1208 divisible by 2? By 5? By 10?

b Is 1208 divisible by 3? By 9?

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **32 QUESTIONS**

REMEMBER 2: even. 5: ends in 0 or 5. 10: ends in 0.

ROUND 1 Questions 1–16: is the number divisible by the number in brackets? Write yes or no.

1 8 633 (10)

2 6 686 (2)

3 5 597 (2)

4 2 270 (5)

5 743 (10)

6 2 069 (2)

7 9 467 (2)

8 2 242 (5)

9 2 204 (5)

10 5 018 (5)

11 8 338 (2)

12 9 111 (10)

13 9 893 (5)

14 845 (10)

15 7 667 (2)

16 9 746 (10)

YOU DO On your own: **Medium** keep going: Round 2.

8 QUESTIONS MORE

ROUND 2 Questions 17–24: is the number divisible by 6 (by 2 and 3) or 9 (digit sum)? Write yes or no.

17 2 133 (9)

18 5 794 (6)

19 7 671 (9)

20 564 (6)

21 6 790 (9)

22 9 774 (9)

23 1 368 (6)

24 9 315 (9)

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO With your teacher: copy what they write on the board.

Example 3 Use divisibility tests to answer.

a Which number is divisible by both 3 and 8: 30, 24, 90 or 94?

b Find the smallest digit $\square$ so that $52\square$ is divisible by 6.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Challenging** Use divisibility tests.

3 QUESTIONS

REMEMBER 4: last 2 digits by 4. 8: last 3 digits by 8.

1 Test 2520 for 2, 3, 4, 5, 6, 8, 9 and 10.

2 Which numbers are divisible by both 3 and 8: 30, 24, 90, 96, 120?

3 Find all digits $\square$ that make $7\square4$ divisible by 3.

✕ Show off your skill: tear along this line and hand it to your teacher ✕

YOU DO **Show off your skill** Choose **ONE** question. Show your working.

Name _____ Class _____

Level 1

Is 735 divisible by 5?

Level 2

Is 4815 divisible by 9?

Level 3

Is 1716 divisible by 6? Explain.

 Extension · Stretch yourself Worked example

Is 3 162 816 divisible by 12?

1. $12 = 3 \times 4$, so test 3 and 4
2. Digit sum $3 + 1 + 6 + 2 + 8 + 1 + 6 = 27$, divisible by 3
3. Last two digits 16, divisible by 4

Answer: Yes

YOU DO

On your own: read the worked example, then try these.

- E1** Is 45 720 divisible by 15? Explain using tests.

- E2** Find the smallest 4-digit number divisible by 2, 3, 4, 5 and 6.

Lesson summary

Missed the lesson? Start here.

Divisibility tests

1. 2: even. 5: ends in 0 or 5. 10: ends in 0.
3. 4: last 2 digits by 4. 8: last 3 digits by 8.

2. 3: digit sum divisible by 3. 9: digit sum by 9.
4. 6: divisible by 2 and 3.

 Level 1

$1208 \div 2?$

1. Ends in 8, even

Answer: yes

 Level 2

$1208 \div 3?$

1. $1 + 2 + 0 + 8 = 11$

Answer: no

 Level 3

$1208 \div 8?$

1. $208 \div 8 = 26$

Answer: yes

 Extension

$3\,162\,816 \div 12?$

1. Test 3 and 4

Answer: yes

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.05

Long division

Date _____

Learning intentions

We are learning to:

- divide by a two-digit number using long division

Success criteria

I can:

- ☐ set out long division
- ☐ use the steps divide, multiply, subtract, bring down
- ☐ write the answer with a remainder

Key terms Write the definition as your teacher explains it.

Divisor

Dividend

Notes

Level 1 · Getting started

Easy · 32 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Use long division.

a $650 \div 25$

b $2976 \div 24$

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **32 QUESTIONS**

REMEMBER Divide: how many times does the divisor go in?

ROUND 1 Questions 1–16: know your multiples.

1 21×7

2 21×3

3 23×9

4 16×2

5 25×2

6 14×5

7 13×2

8 15×7

9 20×6

10 14×3

11 23×5

12 24×5

13 19×7

14 13×5

15 15×8

16 17×4

YOU DO

On your own: **Medium** keep going: Round 2.

3 QUESTIONS MORE

ROUND 2

Questions 7–9: use long division. Write the remainder.

7 $533 \div 23$

8 $2\,124 \div 34$

9 $1\,587 \div 27$

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Use long division, then answer the question.

a $5000 \div 32$

Your teacher works this out. Copy every step.

b How many 45-seat buses are needed for 1000 people?

Your teacher works this out. Copy every step.

YOU DO

On your own: **Challenging** Use long division. Write any remainder.

3 QUESTIONS

REMEMBER Subtract, then bring down the next digit.

1 $3079 \div 12$

2 $5000 \div 32$

3 $9876 \div 21$

✕ Show off your skill: tear along this line and hand it to your teacher ✕

YOU DO

Show off your skill

Choose **ONE** question. Show your working.

Name _____ Class _____

Level 1

Evaluate $84 \div 14$.

Level 2

Evaluate $1728 \div 16$.

Level 3

Evaluate $4000 \div 27$ with remainder.

 Extension · Stretch yourself Worked example

A number divided by 23 gives 41 remainder 17.
Find the number.

1. Number = divisor $\times$ quotient + remainder

2. $23 \times 41 + 17 = 943 + 17$

Answer: 960

YOU DO

On your own: read the worked example,
then try these.

E1 A number divided by 18 gives 55 remainder 4.
Find the number.

E2 Find the largest 3-digit number that leaves
remainder 5 when divided by 13.

Lesson summary

Missed the lesson? Start here.

Remember

1. Divide: how many times does the divisor go in?
2. Multiply and write it under.
3. Subtract, then bring down the next digit.
4. Repeat. What is left is the remainder.

 Level 1

$$96 \div 12$$

1. $12 \times 8 = 96$

Answer: 8

 Level 2

$$650 \div 25$$

1. $65 \div 25 = 2 \text{ r}15$

2. $150 \div 25 = 6$

Answer: 26

 Level 3

$$3079 \div 12$$

1. $30 \div 12 = 2 \text{ r}6$

2. $67 \div 12 = 5 \text{ r}7$

3. $79 \div 12 = 6 \text{ r}7$

Answer: 256 r 7

 Extension

$$23 \times 41 + 17$$

1. $943 + 17$

Answer: 960

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.06

Roman numerals

Date _____

Learning intentions

We are learning to:

- read and write Roman numerals

Success criteria

I can:

- ☐ know the values of I, V, X, L, C, D and M
- ☐ add values when a symbol is followed by a smaller or equal one
- ☐ subtract when a smaller symbol comes before a larger one

Key terms Write the definition as your teacher explains it.

Numeral

Symbol

Notes

Level 1 · Getting started

Easy · 32 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Write each Roman numeral as a number.

a What is XXXVII?

b What is CCXL?

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **32 QUESTIONS**

REMEMBER I 1, V 5, X 10, L 50, C 100, D 500, M 1000.

ROUND 1 Questions 1–16: write each Roman numeral as a number.

1 XCVIII

2 LXI

3 XXXIX

4 XVIII

5 VIII

6 LXXIX

7 LIX

8 XIX

9 LXXXVI

10 XXIII

11 LXVII

12 XLII

13 LXXXIII

14 XCVII

15 LXXXV

16 LXXXII

YOU DO On your own: **Medium** keep going: Round 2.

6 QUESTIONS MORE

ROUND 2 Questions 17–22: write each year in Roman numerals.

17 2003

18 1935

19 1932

20 2013

21 1945

22 1959

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO With your teacher: copy what they write on the board.

Example 3 Write each number in Roman numerals.

a Write 74 in Roman numerals.

Your teacher works this out. Copy every step.

b Write 125 in Roman numerals.

Your teacher works this out. Copy every step.

YOU DO On your own: **Challenging** Harder numerals.

3 QUESTIONS

REMEMBER Smaller before larger: subtract (IV = 4).

1 Write 1999 in Roman numerals.

2 Write MMXXVI as a number.

3 Write this year and your birth year in Roman numerals.

✂ Show off your skill: tear along this line and hand it to your teacher ✂

YOU DO **Show off your skill** Choose **ONE** question. Show your working.

Name _____ Class _____

Level 1

Write XVI as a number.

Level 2

Write 39 in Roman numerals.

Level 3

Write 2024 in Roman numerals.

 Extension · Stretch yourself Worked example

Evaluate XLIV + LVI and write the answer in Roman numerals.

1. XLIV = 44, LVI = 56
2. $44 + 56 = 100$

Answer: C

YOU DO

On your own: read the worked example, then try these.

- E1** Evaluate CCC – XLV and write the answer in Roman numerals.

- E2** Evaluate XII × IX in Roman numerals.

Lesson summary

Missed the lesson? Start here.

- Roman numerals**
1. I 1, V 5, X 10, L 50, C 100, D 500, M 1000.
 2. Larger then smaller: add (VI = 6).
 3. Smaller before larger: subtract (IV = 4).
 4. Never more than 3 of the same symbol in a row.

 Level 1

XXXVII

1. $10 + 10 + 10 + 5 + 1 + 1$

Answer: 37

 Level 2

CCXL

1. $200 + 40$

Answer: 240

 Level 3

125

1. $100 + 20 + 5$

Answer: CXXV

 Extension

XLIV + LVI

1. $44 + 56 = 100$

Answer: C

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.07

Index notation and powers

Date _____

Learning intentions

We are learning to:

- write repeated multiplication using index notation
- evaluate powers

Success criteria

I can:

- ☐ identify the **base** and **index**
- ☐ write a product like $3 \times 3 \times 3 \times 3$ as 3^4
- ☐ evaluate a power such as 5^3

Key terms Write the definition as your teacher explains it.

Base

Index

Power

Notes

Level 1 · Getting started

Easy · 28 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Write in index notation.

a Write $3 \times 3 \times 3 \times 3$ in index notation.

Your teacher works this out. Copy every step.

b Write $7 \times 7 \times 7 \times 7 \times 7 \times 7 \times 7$ in index notation.

Your teacher works this out. Copy every step.

YOU DO

On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line.

28 QUESTIONS

REMEMBER In 5^3 , 5 is the **BASE** and 3 the **INDEX**.

ROUND 1 Questions 1–12: write in index notation.

1 6×6

2 $9 \times 9 \times 9 \times 9 \times 9$

3 $5 \times 5 \times 5 \times 5 \times 5 \times 5$

4 2×2

5 4×4

6 $2 \times 2 \times 2 \times 2 \times 2$

7 $7 \times 7 \times 7$

8 $8 \times 8 \times 8 \times 8$

9 $9 \times 9 \times 9 \times 9 \times 9 \times 9$

10 $7 \times 7 \times 7 \times 7 \times 7 \times 7$

11 $8 \times 8 \times 8$

12 $2 \times 2 \times 2$

YOU DO

On your own: **Medium** keep going: Round 2.

6 QUESTIONS MORE

ROUND 2

Questions 17–22: evaluate. Powers first.

17 $3^3 - 2^2$

18 $3^2 + 4^2$

19 $5^2 + 3^2$

20 $4^2 + 3^2$

21 $2^2 + 3^2$

22 $4^3 + 4^2$

Level 3 • Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Evaluate each power.

a Evaluate 10^5 .

b Evaluate 2^8 .

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO

On your own: **Challenging** Evaluate.

3 QUESTIONS

REMEMBER Count the equal factors to find the index.

① 2^8

② $4^3 - 3^3$

3 $2^3 \times 3^2$

✂ Show off your skill: tear along this line and hand it to your teacher ✂

YOU DO

Show off your skill

Choose **ONE** question. Show your working.

Name	Class
John	Math
Jane	Math
John	Science
Jane	Science
John	History
Jane	History
John	Art
Jane	Art
John	Music
Jane	Music

Write $7 \times 7 \times 7$ in index notation.

Evaluate 4^3 .

Evaluate $3^2 \times 2^4$.

 Extension · Stretch yourself Worked example

Write 64 as a power of 2, 4 and 8.

1. $64 = 2 \times 2 \times 2 \times 2 \times 2 \times 2$
2. $64 = 4 \times 4 \times 4$
3. $64 = 8 \times 8$

Answer: $2^6 = 4^3 = 8^2$

YOU DO

On your own: read the worked example, then try these.

- E1** Write 81 as a power of 3 and of 9.

- E2** Find n if $2^n = 1024$.

Lesson summary

Missed the lesson? Start here.

Remember

1. In 5^3 , 5 is the **base** and 3 the **index**.

3. Count the equal factors to find the index.

2. $5^3 = 5 \times 5 \times 5$, not 5×3 .

4. Squared means index 2; cubed means index 3.

 Level 1

$3 \times 3 \times 3 \times 3$

1. Four 3s

Answer: 3^4

 Level 2

5^3

1. $5 \times 5 \times 5$

Answer: 125

 Level 3

2^8

1. 2, 4, 8, 16, 32, 64, 128, 256

Answer: 256

 Extension

64 as powers

1. 2^6 , 4^3 , 8^2

Answer: 2^6 , 4^3 , 8^2

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.08

Square roots and cube roots

Date _____

Learning intentions

We are learning to:

- find square roots and cube roots

Success criteria

I can:

- ☐ know the square numbers to 15^2 and the cube numbers to 10^3
- ☐ find $\sqrt{\quad}$ as the number that squares to it
- ☐ find $\sqrt[3]{\quad}$ as the number that cubes to it

Key terms Write the definition as your teacher explains it.

Square root

Cube root

Notes

Level 1 · Getting started

Easy · 32 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Evaluate each square root.

a $\sqrt{49}$

b $\sqrt{144}$

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line.

32 QUESTIONS

REMEMBER $\sqrt{49} = 7$ because $7^2 = 49$.

ROUND 1 Questions 1–16: evaluate each square root.

1 $\sqrt{4}$

2 $\sqrt{36}$

3 $\sqrt{484}$

4 $\sqrt{196}$

5 $\sqrt{400}$

6 $\sqrt{289}$

7 $\sqrt{441}$

8 $\sqrt{225}$

9 $\sqrt{144}$

10 $\sqrt{576}$

11 $\sqrt{625}$

12 $\sqrt{1}$

13 $\sqrt{169}$

14 $\sqrt{9}$

15 $\sqrt{25}$

16 $\sqrt{361}$

YOU DO On your own: **Medium** keep going: Round 2.

6 QUESTIONS MORE

ROUND 2 Questions 17–22: between which two whole numbers is it?

17 $\sqrt{60}$

18 $\sqrt{52}$

19 $\sqrt{116}$

20 $\sqrt{145}$

21 $\sqrt{17}$

22 $\sqrt{150}$

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO With your teacher: copy what they write on the board.

Example 3 Evaluate, then estimate.

a $\sqrt{(9 \times 16)}$

Your teacher works this out. Copy every step.

b Between which two whole numbers is $\sqrt{50}$?

Your teacher works this out. Copy every step.

YOU DO On your own: **Challenging** Think it through.

3 QUESTIONS

REMEMBER Learn the squares to 15^2 and cubes to 10^3 .

1 Between which two whole numbers is $\sqrt{90}$?

2 Between which two whole numbers is $\sqrt[3]{100}$?

3 Evaluate $\sqrt{(36 + 64)}$. Is it the same as $\sqrt{36} + \sqrt{64}$?

✂ Show off your skill: tear along this line and hand it to your teacher ✂

YOU DO **Show off your skill**

Choose **ONE** question. Show your working.

Name _____ Class _____

Level 1

Evaluate $\sqrt{64}$.

Level 2

Evaluate $\sqrt[3]{125}$.

Level 3

Evaluate $\sqrt{121} - \sqrt[3]{1000}$.

 Extension · Stretch yourself Worked example

Find $\sqrt{1600}$ without a calculator.

1. $1600 = 16 \times 100$
2. $\sqrt{16} = 4$ and $\sqrt{100} = 10$

Answer: 40

YOU DO

On your own: read the worked example, then try these.

- E1** Find $\sqrt{4900}$ and $\sqrt[3]{27\,000}$ without a calculator.

- E2** A cube has volume 343 cm^3 . Find the length of its edge.

Lesson summary

Missed the lesson? Start here.

- Remember**
1. $\sqrt{49} = 7$ because $7^2 = 49$.
 2. $\sqrt[3]{64} = 4$ because $4^3 = 64$.
 3. Learn the squares to 15^2 and cubes to 10^3 .
 4. Estimate a root using the nearest squares.

 Level 1

$$\sqrt{144}$$

1. $12 \times 12 = 144$

Answer: 12

 Level 2

$$\sqrt[3]{729}$$

1. $9 \times 9 \times 9 = 729$

Answer: 9

 Level 3

$$\sqrt{50}$$

1. $49 < 50 < 64$

Answer: between 7 and 8

 Extension

$$\sqrt{1600}$$

1. 4×10

Answer: 40

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.09

Prime and composite numbers

Date _____

Learning intentions

We are learning to:

- identify prime and composite numbers

Success criteria

I can:

- ☐ know a prime has exactly 2 factors
- ☐ know a composite number has more than 2 factors
- ☐ list the primes and composites in a range

Key terms Write the definition as your teacher explains it.

Factor

Prime

Composite

Notes

Level 1 · Getting started

Easy · 28 questions

WE DO With your teacher: copy what they write on the board.

Example 1 List the factors, then decide.

a List the factors of 12 and of 13.

b Is 1 prime, composite or neither?

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **28 QUESTIONS**

REMEMBER A **PRIME** has exactly 2 factors: 1 and itself.

ROUND 1 Questions 1–16: prime (P) or composite (C)?

1 92

2 18

3 86

4 16

5 33

6 78

7 99

8 79

9 75

12 52

13 70

14 97

15 21

16 38

Extension · Stretch yourself

Worked example

Is 143 prime?

1. Only test primes up to $\sqrt{143} \approx 12$: 2, 3, 5, 7, 11
2. $143 \div 11 = 13$

Answer: No: $143 = 11 \times 13$

YOU DO

On your own: read the worked example, then try these.

- E1 Is 197 prime? Show your tests.

- E2 Is 221 prime?

Lesson summary

Missed the lesson? Start here.

Remember

1. A **prime** has exactly 2 factors: 1 and itself.
3. 1 is neither prime nor composite.

2. A **composite** number has more than 2 factors.
4. Test for primes by dividing by 2, 3, 5, 7, ...

Level 1

Factors of 12

1. 1×12 , 2×6 , 3×4

Answer: 1, 2, 3, 4, 6, 12

Level 2

Is 51 prime?

1. $5 + 1 = 6$ so divisible by 3

Answer: no, $51 = 3 \times 17$

Level 3

Primes 26 to 50

1. Test each odd number

Answer: 29, 31, 37, 41, 43, 47

Extension

Is 143 prime?

1. Try 11

Answer: no, 11×13

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.10

Prime factors

Date _____

Learning intentions

We are learning to:

- write a number as a product of prime factors using a factor tree

Success criteria

I can:

- ☐ draw a factor tree until every branch ends in a prime
- ☐ write the answer in index notation
- ☐ use prime factors to find square and cube roots

Key terms Write the definition as your teacher explains it.

Factor tree

Prime factor

Notes

Level 1 · Getting started

Easy · 24 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Draw a factor tree for each number.

a Use a factor tree for 60.

Your teacher works this out. Copy every step.

b Use a factor tree for 200.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **24 QUESTIONS**

REMEMBER Split the number into two factors.

ROUND 1 Questions 1–12: write as a product of two prime numbers.

- | | | | |
|----------------------|-----------------------|-----------------------|----------------------|
| 1 26
_____ | 2 65

21 $2^2 \times 3 \times 5$

22 $2^3 \times 3$

23 $2^3 \times 3 \times 5$

24 2×3

25 $2^3 \times 3^2 \times 5$

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Use prime factors to find each root.

a Use a factor tree to find $\sqrt{256}$.

b Use a factor tree to find $\sqrt[3]{5832}$.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO

On your own: Challenging Use prime factors to evaluate each root.

3 QUESTIONS

REMEMBER Write the primes in order, using indices.

1 $\sqrt{256}$

2 $\sqrt{324}$

3 $\sqrt[3]{5832}$

Extension · Stretch yourself

Finished the challenge? Stretch yourself here.

Worked example

What is the smallest number that 72 must be multiplied by to make a perfect square?

1. $72 = 2^3 \times 3^2$
2. A square needs even indices
3. $\times 2$ gives $2^4 \times 3^2 = 144$

Answer: 2

YOU DO

On your own: read the worked example, then try these.

- E1 Find the smallest number that 180 must be multiplied by to make a perfect square.

- E2 Find the smallest number that 18 must be multiplied by to make a perfect cube.

✕ Show off your skill: tear along this line and hand it to your teacher ✕

YOU DO

Show off your skill

Choose ONE question. Show your working.

Name _____ Class _____

Level 1

Write 20 as a product of primes.

Level 2

Write 84 as a product of primes in index notation.

Level 3

Use prime factors to find $\sqrt{576}$.

Lesson summary

Missed the lesson? Start here.

Remember

1. Split the number into two factors.
2. Keep splitting until every branch is prime.
3. Write the primes in order, using indices.
4. For $\sqrt{\quad}$, halve the indices; for $\sqrt[3]{\quad}$, divide them by 3.

Level 1

Factor tree for 60

1. $60 = 6 \times 10 = 2 \times 3 \times 2 \times 5$

Answer: $2^2 \times 3 \times 5$

Level 2

200

1. $200 = 2 \times 100 = 2 \times 10 \times 10$

Answer: $2^3 \times 5^2$

Level 3

$\sqrt{256}$

1. $256 = 2^8$
2. Halve the index: 2^4

Answer: 16

Extension

$72 \times ? = \text{square}$

1. $2^3 \times 3^2$

Answer: 2

My reflection: what did I learn today? Which question was hardest, and why?

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.11

Highest common factor

Date _____

Learning intentions

We are learning to:

- find the highest common factor (HCF) of two numbers

Success criteria

I can:

- ☐ list the factors of each number and find the largest common one
- ☐ use prime factors to find the HCF
- ☐ use the HCF to solve problems

Key terms Write the definition as your teacher explains it.

Common factor

HCF

Notes

Level 1 · Getting started

Easy · 28 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Find the HCF by listing factors.

a Find the HCF of 12 and 18.

b Find the HCF of 20 and 48.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **28 QUESTIONS**

REMEMBER List the factors of both numbers.

ROUND 1 Questions 1–16: find the highest common factor (HCF).

1 30 and 15

2 12 and 28

3 20 and 12

4 14 and 2

5 14 and 35

6 15 and 35

7 30 and 36

8 18 and 45

9 35 and 28

10 5 and 25

11 7 and 35

12 30 and 6

13 5 and 15

14 15 and 21

15 24 and 42

16 56 and 32

YOU DO

On your own: **Medium** keep going: Round 2.

6 QUESTIONS MORE

ROUND 2

Questions 17–22: find the HCF of the three numbers.

17 24, 40 and 8

18 2, 12 and 6

19 45, 9 and 27

20 20, 60 and 30

21 10, 6 and 8

22 15, 30 and 10

Level 3 · Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Use factor trees to find the HCF.

a Use factor trees to find the HCF of 243 and 162.

b Use factor trees to find the HCF of 180 and 252.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO

On your own: **Challenging** HCF problems.

3 QUESTIONS

REMEMBER The largest one is the **HCF**.

① Simplify $36/84$ using the HCF.

2 24 boys and 32 girls are put into equal teams with no mixing. What is the largest team size?

3 Two ribbons are 45 cm and 75 cm long. They are cut into equal pieces as long as possible. How long is each piece?

✂ Show off your skill: tear along this line and hand it to your teacher ✂

Find the HCF of 8 and 20.

Find the HCF of 42 and 70.

Use prime factors to find the HCF of 168 and 252.

 Extension · Stretch yourself Worked example

Find the HCF of 36, 60 and 84.

- $36 = 2^2 \times 3^2$, $60 = 2^2 \times 3 \times 5$, $84 = 2^2 \times 3 \times 7$
- Common primes: $2^2 \times 3$

Answer: 12

YOU DO

On your own: read the worked example, then try these.

- E1** Find the HCF of 48, 72 and 120.

- E2** Find the HCF of 105, 165 and 195.

Lesson summary

Missed the lesson? Start here.

- Remember**
1. List the factors of both numbers.
 3. The largest one is the **HCF**.

2. Circle the common factors.
4. Or: multiply the prime factors they share.

 Level 1

HCF of 12 and 18

1. 12: 1, 2, 3, 4, 6, 12
2. 18: 1, 2, 3, 6, 9, 18

Answer: 6

 Level 2

HCF of 20 and 48

1. Common: 1, 2, 4

Answer: 4

 Level 3

HCF of 243 and 162

1. $243 = 3^5$
2. $162 = 2 \times 3^4$

Answer: $3^4 = 81$

 Extension

HCF of 36, 60, 84

1. $2^2 \times 3$

Answer: 12

This space is left blank on purpose. It is the back of your exit ticket.

LESSON
3.12

Lowest common multiple

Date _____

Learning intentions

We are learning to:

- find the lowest common multiple (LCM) of two numbers

Success criteria

I can:

- ☐ list multiples of each number and find the smallest common one
- ☐ use prime factors to find the LCM
- ☐ use the LCM to solve problems

Key terms Write the definition as your teacher explains it.

Multiple

LCM

Notes

Level 1 · Getting started

Easy · 28 questions

WE DO With your teacher: copy what they write on the board.

Example 1 Find the LCM by listing multiples.

a Find the LCM of 4 and 6.

b Find the LCM of 6 and 8.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO On your own: **Easy** practise the skill. Work down the page, one round at a time. Write each answer on its line. **28 QUESTIONS**

REMEMBER List multiples of each number.

ROUND 1 Questions 1–16: find the lowest common multiple (LCM).

1 8 and 9

2 3 and 12

3 7 and 8

4 11 and 2

5 9 and 3

6 5 and 10

7 3 and 6

8 5 and 12

9 10 and 5

10 8 and 7

11 5 and 3

12 4 and 12

13 10 and 12

14 2 and 9

15 10 and 6

16 6 and 7

YOU DO

On your own: **Medium** keep going: Round 2.

6 QUESTIONS MORE

ROUND 2

Questions 17–22: find the LCM of the three numbers.

17 8, 6 and 2

18 5, 4 and 7

19 5, 9 and 8

20 10, 4 and 3

21 4, 2 and 5

22 10, 2 and 5

Level 3 • Challenge

Challenging · 3 questions · then try the extension

WE DO

With your teacher: copy what they write on the board.

Example 3

Use factor trees to find the LCM.

a Use factor trees to find the LCM of 25 and 16.

b Use factor trees to find the LCM of 12 and 90.

Your teacher works this out. Copy every step.

Your teacher works this out. Copy every step.

YOU DO

On your own: **Challenging** LCM problems.

3 QUESTIONS

REMEMBER

Prime factors: take the highest power of each prime.

1 Buses leave at 6:00 am. One route runs every 12 minutes and another every 15 minutes. When do they next leave together?

2 Find the lowest common denominator of $\frac{5}{6}$ and $\frac{3}{8}$.

3 Hot dogs come in packs of 10 and buns in packs of 8. What is the smallest number of each you can buy to have no leftovers?

✂ Show off your skill: tear along this line and hand it to your teacher ✂

YOU DO

Show off your skill

Choose **ONE** question. Show your working.

Name	Class
1. _____	_____
2. _____	_____
3. _____	_____
4. _____	_____
5. _____	_____
6. _____	_____
7. _____	_____
8. _____	_____
9. _____	_____
10. _____	_____

Level 1

Find the LCM of 3 and 4.

Find the LCM of 12 and 16.

Use prime factors to find the LCM of 28 and 42.

Extension · Stretch yourself

Worked example

Find the LCM of 4, 6 and 10.

1. $4 = 2^2$, $6 = 2 \times 3$, $10 = 2 \times 5$
2. Highest power of each prime: $2^2 \times 3 \times 5$

Answer: 60

YOU DO

On your own: read the worked example, then try these.

- E1** Find the LCM of 6, 8 and 9.

- E2** Three lights flash every 4, 5 and 6 seconds. They flash together now. When do they next flash together?

Lesson summary

Missed the lesson? Start here.

- Remember**
1. List multiples of each number.
 2. The smallest common one is the **LCM**.
 3. Prime factors: take the highest power of each prime.
 4. $\text{LCM} \times \text{HCF} = \text{the product of the two numbers.}$

Level 1

LCM of 4 and 6

1. 4, 8, 12
2. 6, 12

Answer: 12

Level 2

LCM of 18 and 10

1. 18, 36, 54, 72, 90
2. 10, ..., 90

Answer: 90

Level 3

LCM of 25 and 16

1. 5^2 and 2^4
2. No common primes: multiply

Answer: 400

Extension

LCM of 4, 6, 10

1. $2^2 \times 3 \times 5$

Answer: 60

This space is left blank on purpose. It is the back of your exit ticket.
